Product Feature And Application

The flukes of the Ship Mooring Pool Anchor are constructed out of two shaped plates, which are welded together. Therefore, the flukes of the 316 Stainless Steel N Type Pool Anchor are hollow. This construction gives the anchor a

large resistance against bending forces. The extreme points of the Pool anchor are wider than the width of the crown plates. Consequently the anchor gives a very stable anchoring character.

The 316 Stainless Steel N Type Pool Anchor will always have its flukes in the vertical position while lifting the anchor.

The balanced anchor is easier to stow in the bow recess and slots in when you bring it up. The unbalanced obviously tilts outwards and can lock outside the anchor recess.

N Type Pool Anchor complete with crown shackle. This Pool N anchor is a stockless anchor type designed to fit anchor pockets on modern ships, it is said to be the most beautiful anchor. Probably for this reason large yachts and cruise vessels are often equipped with this Casting Steel Pool anchor. This does not mean that these mooring Pool anchors are not in use on board of cargo carriers. On the contrary, some of the biggest container shippers in the world equip all their vessels with this 316 Stainless Steel N Type Pool Anchor.

Product Details

316 Stainless Steel N Type Pool Anchor have several key features that make them a reliable anchoring choice:

Material: Usually made of high-grade stainless steel, such as 316L, which has excellent corrosion resistance in marine environments.

Design: The 316 Stainless Steel N Type Pool Anchor has a classic design with two symmetrical flukes that pivot at the crown. This design allows for quick set-up and reliable retention.

Hollow Claws: The claws are hollow, which not only reduces weight but also provides extra strength and resistance to bending. This design also facilitates faster and more efficient penetration into different seafloors.

Welded Construction: The 316 Stainless Steel N Type Pool Anchor flukes are welded together to form a solid unit. This construction ensures the durability of the anchor and prevents any weak point.
